

# Herzum Approval Documentation

This documentation is for the latest downloadable version of [Herzum Approval 4](#).

Not using this? See [the documentation for other versions](#).

Herzum Approval integrates with Jira workflow and makes you able to build sophisticated approval workflow.

Using a powerful configuration panel, an administrator can quickly setup:

- Requested approvers by project, issue type and status or for a single issue
- Automatic workflow transitioning based on the number of approbations and rejections
- Automatic approval notification via email
- Conditions enabling and disabling the approvals
- Built-in Approval services

Users can enjoy:

- Intuitive and easy way to manage approval status
- Capability to approve or reject an approval request via email
- Built-in JQL functions letting aware of the current approval state of any item
- Built-in gadget
- Bulk approbation
- Approval Delegation
