Herzum Apps Documentation

Welcome to the Herzum Apps documentation home page!

Herzum Approval
Herzum Approval for Jira on Premises provides a simple and flexible way of managing and processing the approval of JIRA issues.

Administrators can easily define approval criteria based on workflow transitions or project/issue types.

Learn more ->

Herzum Quick Linker
Herzum Quick Linker for Jira allows to create linked issues with a single click of a button.

Administrators can configure, among other things, source and destination for projects and issue types and the labels for the buttons that create and link your issues!

Learn more ->

Herzum Moderator Approval
Herzum Moderator Approval is an app for Bitbucket that lets you define, at a project or repository level, Moderators that need to approve a pull-request before merging.

Learn more ->

Herzum Attachment Manager
Herzum Attachment Manager is a powerful add-on for JIRA that lets you define, at the project level, the maximum number of attachments and also overwrite the default JIRA maximum attachment size.
