

Creating an attachment limit configuration for a project

By default, a Jira Project has an [attachment size limit](https://confluence.atlassian.com/x/MglSCw) that is defined as per global instance configuration (<https://confluence.atlassian.com/x/MglSCw>) but it cannot be specialized for a project.

Herzum Attachment Manager app allows to configure a limit, by project, on the number and on the max size for the files that may be attached to an issue.

You can easily setup the number and the max size of files that may be attached to an issue. by performing the following steps:

- Select **Settings** () **Add-ons** **Herzum Attachment Manager** **Configure Attachments**
- Click **Add new attachment limit**

Herzum Attachment Manager - Configuration

[+ Add new attachment limit](#)

Project Name	Project Key	Attachment Size Limit	Total Attachment Number	Edit 	Delete 
 tasks	TAS	0.49 kB	1		
 andrew	AND	0.00 kB	5		

- Choose a Project from the drop down "Project Name"

New Attachment Limit Configuration

Project Name Sample Project ▼

Max Attachment Size

The total upload size limit in bytes

Total Number of Attachments

A negative number will disable the check

Save Cancel

- Fill the field **Max Attachment Size** with the desired max attachment size **in bytes** for any issue that belong to the selected project
 -  If you set a negative number on the *Max Attachment Size*, the overall Jira setting is assumed to be checked out
- Fill the field **Total Number of Attachments** with the desired max number of files that may be attached to any issue that belong to the selected project
 -  If you set a negative number on the *Total Number of Attachments*, no limit on the number of attachments is assumed.
